

An earthquake is a set of vibration brief and brutal.

Refrain : The seismometers make it possible to discover the interior of the planet thanks to the waves

A seismometer is an instrument that measures motion of the ground, caused by an earthquake

Refrain: The seismometers make it possible to discover the interior of the planet thanks to the waves

When too much energy accumulates in an area ,the rocks break down deep along a fault.

Refrain seismometers make it possible to discover the interior of the planet thanks to the waves

The rupture causes a release of the accumulated energy in the form of seismic waves
